

Minimum support version: 5.0 (1512+)

WAF supports **IncrediBuild** which allows for distributed network builds which is effective when compiling larger projects.

IncrediBuild builds can be enabled/disabled using the GUI [WAF Interface](#) or the [WAF Build Options](#):

- use_incredibuild
- use_incredibuild_<platform> (see [WAF Supported Platforms](#))

The maximum number of parallel tasks can be adjusted using the "*incredibuild_max_cores*" [WAF Build Option](#).

Incredibuild Users

Only use *Build-> Build Solution*

Do not use the *IncrediBuild* Build Interface.

IncrediBuild tasks are started from within CRY WAF itself.
